PASSENGER TRANSPORT

EVO BELT KIT

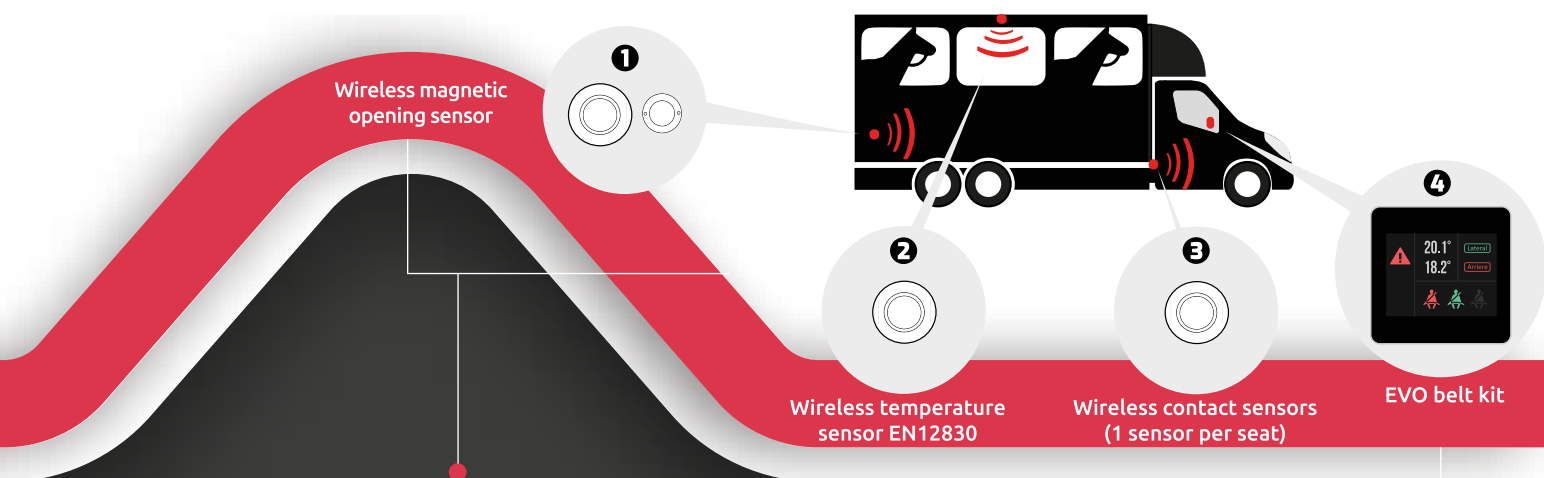

TEMPERATURE AND OPENING RECORDER INCLUDING BELT MANAGEMENT OF AN ADDITIONAL SEATING BENCH SEAT

The hyphen tech EVO belt kit secures 3 seat belts while recording data from 2 temperature sensors and 2 opening devices. Perfectly adapted for use in a horse transport vans equipped with a seating bench.

The temperature measurement points are time-stamped in the device's memory and can be transmitted to the cloud with a mobile application or to an SD card.

The absence of a seatbelt fastened on an occupied seat will raise a visual and audible alert on the screen to the driver.

This kit requires an NC (normally closed) contact built into the belt and a NO (normally open) pressure contact on the seat.
